

Cloudkit Readme:

Hey everyone, CJ here! I got cloudkit enabled. To make sure we are doing this all correctly, we will all need to update our provisioning profile. In order to do this follow these steps:

1. pull down the developer branch — inside there should be our project for all of us to work on and add to instead of having all of our own separate parts.
2. open Xcode
3. open the project
4. with the project open, go to the top and click Xcode and go to preferences
5. click on accounts
6. make sure you highlight the university of missouri name selected.
7. click view details
8. refresh

hopefully you should now see FitTogetherTwo in your provisioning profile.

Contact Tyten if you have any issues!
